

## Sound quality comparing test from [www.zero-project.gr](http://www.zero-project.gr)

### 1) Start your media player by clicking [here](#).

- a) The same sound will be played from two different mp3s at 192 and 320 kbps. Can you find the bitrates only by listening?
- b) It is recommended to minimize your player, so you will not be able to see any bitrate information.
- c) If your player doesn't recognize the playlist file, you can drop all the files from the folder "Media" into your player's interface.

### 2) By listening order, check the bitrate of each sound file.
